

Impression Packers

Product Description:

The IPI impression packer is an inflatable packer element that can be run in on tubing or drill pipe, that after being inflated into open hole or casing imprints the details of the sidewall with its unique memory retention rubber. Fine details of the sidewall are permanently imprinted on the packer element for examination at surface. Directional tools can be run in conjunction with the impression packer to determine the orientation of the imprint.

Applications:

- ◆ Formation fractures
- ◆ Rock characterization
- ◆ Casing damage or splits in casing
- ◆ Corrosion or erosion pitting

Benefits:

- ◆ Customizable packer diameter and impression lengths
- ◆ Redressable packer element
- ◆ Directional tools for impression orientation
- ◆ Impression rubber is reformable to remove previously imprinted impressions
